1.0 Purpose of the Coordination Plan

Section 6002 of the Safe, Accountable, Flexible, Efficient Transportation Equity Act – A Legacy for Users (SAFETEA-LU) (P.L. 109-059) established an environmental review process for all projects that require an environmental impact statement (EIS) under the National Environmental Policy Act of 1969 (NEPA). SAFETEA-LU also requires the lead agency to prepare a coordination plan to establish a schedule and process for coordinating public and agency participation and comment. The proposed South Lawrence Trafficway (SLT) project is a supplemental EIS (SEIS) to the 1990 K-10/South Lawrence Trafficway EIS and will follow the guidelines of Section 6002 of SAFETEA-LU as well as any updated requirements for this process found in the Fixing America’s Surface Transportation (FAST) Act (P.L. 114-94). The study team has prepared a coordination plan to describe the planned coordination for agency and public participation for the project.

2.0 Project Background

2.1 Project Location

The proposed project is the improvement of K-10 Highway South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas. The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. Appendix A contains the project study area map. The overall length is 19.0 miles and is subdivided into sections as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

2.2 Purpose and Need

The purpose of the South Lawrence Trafficway is to provide the traveling public with an efficient and cost-effective transportation facility for users of K-10 Highway and the connected state highway system. In addition, the purpose and need established in the 1990 EIS will be carried forward for the SEIS, which is to relieve congestion on the local street network within the city of Lawrence. The goals of the current proposed project on the West Section are to reduce congestion, enhance safety, promote a multimodal transportation system and support local and regional growth, while minimizing or avoiding impacts to sensitive project environmental features within the project footprint.

The proposed project is needed to:

- **Reduce congestion** and improve the traffic capacity to meet existing and future travel demands,
- **Enhance safety** to help address high crash locations within the study area,
• **Promote a multimodal transportation system** by ensuring the project accommodates the needs of other transportation modes, and
• **Support local and regional growth** by providing and coordinating transportation connections to be consistent with planned and proposed community land use and development.

### 2.3 Project History

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway onto K-10, thereby achieving an improved level of traffic service on the local street network.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The **K-10 West Leg Concept Study**, conducted from 2014-2016 for the Kansas Department of Transportation, investigated the current and future needs and functions in the K-10/SLT West Section. This study considered alternatives for the future widening and upgrade of the corridor, which modified the current 2-lane expressway design to a 4-lane freeway design with limited access, and grade separated interchanges in place of existing at-grade intersections. The concept study will be used as a reference document during the preparation of the SEIS.

### 3.0 Initial Coordination

To meet the requirements of SAFETEA-LU, the Kansas Department of Transportation (KDOT) formally notified the Federal Highway Administration (FHWA) of its intent to initiate the NEPA EIS process for this project on July 19, 2018. A project initiation letter was signed by KDOT and submitted to FHWA on August 17, 2018.

#### 3.1 Notice of Intent

After project initiation, FHWA with the assistance of KDOT prepared a Notice of Intent (NOI) to prepare an SEIS, as required by the Council of Environmental Quality (CEQ) regulations 40 CFR 1501.7. The NOI was published in the *Federal Register* on September 6, 2018. A copy is included in [Appendix B](#). This was the first step in the agency and public coordination process for the project.

#### 3.2 Initial Coordination Package

KDOT prepared an initial coordination packet for distribution to agencies, officials and organizations identified in Table 1 in Section 3.2.4. This packet was sent to agencies during September 2018. This
packet includes a letter to coordinate on the project, a project description detailing the project and a project study area map. The letter identifies the initial purpose and need for the project, details the history of the project, provides a summary of preliminary alternatives to be considered, and examples of environmental resources that will be considered throughout the course of the SEIS. Two types of agencies received the Initial Coordination Packet; Cooperating Agencies and Participating Agencies.

The study team also scheduled a meeting with cooperating and participating resource agencies on October 4, 2018 to review the project. The initial coordination packet and meeting are meant to fulfill the scoping activities point of collaboration. Appendix D contains copies of response letters received from the agencies.

### 3.2.1 Lead Agencies

KDOT will serve as the lead state agency for the project. FHWA will serve as the lead federal agency. The environmental review, consultation and other actions as required by Federal law for this project will be carried out by KDOT. KDOT will develop the environmental documents in accordance with 23 CFR 771 and 40 CFR 150-1508 in coordination with FHWA.

KDOT, in cooperation with FHWA, will:

- Identify cooperating and participating agencies in the environmental review process;
- Develop a coordination plan;
- Develop a public involvement plan;
- Solicit input on the project’s purpose and need from the public and cooperating and participating agencies;
- Finalize the purpose and need statement;
- Prepare and approve a Draft SEIS;
- Provide the public and cooperating and participating agencies opportunities to offer input on alternatives and the Draft SEIS;
- Select the Preferred Alternative;
- Prepare and approve a combined Final SEIS/Record of Decision (ROD);
- Ensure environmental commitments are completed; and
- Manage the environmental review process and address/resolve any potential issues.

### 3.2.2 Cooperating Agencies

Cooperating agencies are those governmental agencies specifically requested by the lead agency to participate during the environmental evaluation process for the project. Cooperating agencies are federal agencies that have jurisdiction by law regarding aspects of the proposed project or special expertise pertaining to the project. KDOT, in coordination with FHWA, has identified three cooperating agencies for invitation to participate in the project: the U.S. Army Corps of Engineers (USACE), the U.S. Fish and Wildlife Service (USFWS), and the U.S. Environmental Protection Agency (EPA). These proposed cooperating agencies will assist the preparation, coordination and review of the SEIS where necessary. Appendix C contains copies of the cooperating agency invitation letters.
If new information reveals the need to request another agency to serve as a cooperating agency, then KDOT in consultation with FHWA will issue that agency an invitation.

3.2.3 Participating Agencies

SAFETEA-LU (Section 6002) includes a category of agencies to participate in the environmental review process for EISs. These are federal and non-federal governmental agencies that may have an interest in the project because of their jurisdictional authority, special expertise and/or statewide interest. All federal, state, regional, and local government agencies that may have an interest in the project will be invited to serve as participating agencies. Non-governmental organizations and private entities cannot serve as participating agencies.

For the SLT SEIS, Federal, State, tribal, regional, and local government agencies that may have an interest in the project were invited to serve as participating agencies. Appendix C contains copies of the invitation letters to participating agencies. Participating agencies are listed in section 3.2.4.

The roles and responsibilities of participating agencies include, but are not limited to:

- Participate in the scoping process;
- Participate in the NEPA process by providing input on the development of the purpose and need statement, range of alternatives, and screening criteria; and
- Identifying, as early as practicable, any issues of concern regarding the project’s potential environmental or socioeconomic impacts. Participating agencies also may participate in the issue resolution process.
- Reviewing and providing comment on the Draft SEIS.

If, during the progress of the project, new information indicates that an agency not previously requested to be a participating agency does indeed have authority, jurisdiction, acknowledged expertise or information relevant to the project, then KDOT, in consultation with FHWA, will promptly extend an invitation to that agency to be a participating agency.

Accepting the designation as a participating agency does not indicate project support and does not provide an agency with increased oversight or approval authority beyond its statutory limits, if applicable. Cooperating agencies are, by definition, participating agencies, but not all participating agencies are cooperating agencies. The roles and responsibilities of cooperating and participating agencies are very similar, but cooperating agencies have a slightly higher degree of authority, responsibility, and involvement in the environmental review process.

Comment periods for the public or participating agencies will not exceed 30 days unless a different comment period is established by the study team, lead agency, and all participating agencies.

3.2.4 Agency List

### 4.0 Coordination Points

Lead and cooperating agencies for the project must agree that the project may move forward at key points including the impact assessment methodologies, purpose and need, Reasonable Alternatives carried forward, preliminary Draft SEIS, and combined Final SEIS/ROD. Cooperating agencies may also be asked to review key technical memoranda that deal with their expertise/jurisdiction. Cooperating agencies have special authority or expertise regarding certain aspects of the project.

Participating agencies may also be asked to review deliverables and provide feedback at the same collaboration points, including impact assessment methodologies, purpose and need, Reasonable Alternatives carried forward, preliminary Draft SEIS and combined Final SEIS/ROD. The study team will
address comments received from participating agencies before finalizing documents for official approval.

The lead agency (KDOT) will ensure information is presented to participating agencies at key points throughout the project through coordination. An agreed upon amount of time will be provided for agencies to review and submit feedback; this will typically be 30 days from receipt of the materials. Key coordination points for this project and anticipated dates for coordination are shown in Table 2.

5.0 Public Involvement and Stakeholder Outreach

Due to the importance of the South Lawrence Trafficway project to the region, a comprehensive public involvement and stakeholder outreach program has been developed. A copy of the Stakeholder Engagement and Communications Plan showing key activities and points of contact with the public, stakeholders and project advisory group is included in Appendix E.

Figure 1 shows the general schedule for public involvement and stakeholder outreach identified for this project.

Figure 1: Public Outreach Schedule

6.0 Project Schedule

The project is expected to be completed the Summer of 2021. Figure 2 contains the schedule for the completion of the SEIS and issuance of a combined Final SEIS/ROD for this project. This schedule will be revised and updated as the project moves forward, and if additional information is discovered that requires schedule adjustments. Any updates to the project coordination plan and schedule will be provided to the cooperating and participating agencies for the project.
7.0 Revision History

The revision history log will be used to identify changes to the Coordination Plan.

Appendix A – Project Study Area Map
Federal Register / Vol. 83, No. 173 / Thursday, September 6, 2018 / Notices

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Douglas County, Kansas

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Intent.

SUMMARY: The FHWA is issuing this Notice of Intent (NOI) to advise the public that a supplement to the final environmental impact statement will be prepared to address impacts of proposed improvements to a section of K–10 Highway South Lawrence Trafficway, located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

FOR FURTHER INFORMATION CONTACT: Federal Highway Administration—Kansas Division: Richard E. Backlund, Division Administrator, 6111 SW 29th Street, Suite 100, Topeka, KS 66614–4271, telephone (785) 273–2600, or via email at: richard.backlund@dot.gov; Kansas Department of Transportation: Catherine M. Patrick, State Transportation Engineer, Dwight D. Eisenhower State Office Building, 700 SW Harrison Street, Topeka, KS 66603–3745, telephone (785) 296–2799, or via email at: catherine.patrick@ks.gov.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Kansas Department of Transportation (KDOT), will prepare a Supplemental Environmental Impact Statement (SEIS) on a proposal to improve K–10/South Lawrence Trafficway (SLT) located in Douglas County, Kansas. The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US–59/Iowa Street. The East Section begins at US–59/Iowa Street and continues to the existing K–10/23rd Street system interchange. The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K–10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The Purpose and Need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while balancing sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K–10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in each direction in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007. The FHWA then issued a Record of Decision (ROD) in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated for the West Section, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, there will be discussions about interchange alternatives at I–70/East 600 Road/Lecompton Road and K–10/I–70/ North 1800 Road.

The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s/Turnpike to US–59/Iowa Street (approximately 8.7 miles). The East Section begins at US–59/Iowa Street and continues to the existing K–10/23rd Street system interchange. The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K–10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The Purpose and Need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while balancing sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K–10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in each direction in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007. The FHWA then issued a Record of Decision (ROD) in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated for the West Section, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, there will be discussions about interchange alternatives at I–70/East 600 Road/Lecompton Road and K–10/I–70/ North 1800 Road.

The FHWA and KDOT plan to prepare a combined Final SEIS/Record of Decision for the project. The SEIS will analyze the potential social, economic, and environmental impacts resulting from the proposed project. The following issues will be specifically analyzed as part of the SEIS: Impacts to the aquatic ecosystem; impacts to cultural resources; impacts to threatened and endangered species; impacts to floodplains; impacts to transportation; impacts to parks/recreation; environmental justice; secondary and cumulative impacts; and socioeconomics. This analysis will include a detailed examination of direct, indirect and cumulative impacts that could result from the construction of a selected alternative emanating from this SEIS. Other Federal approvals or permits that may be required include a Section 404 Permit from the U.S. Army Corps of Engineers (USACE), a floodplain development permit from the state office of the Federal Emergency Management Agency (FEMA), as well as water resource and floodplain permits from the Kansas Division of Water Resources.

To ensure that the full range of issues related to the proposed action are addressed and all significant issues defined, comments and suggestions are invited from all interested parties. Comments or questions concerning the proposed action and the SETS should be directed to FHWA or KDOT at the addresses provided above.

Issued on: August 22, 2018.

Richard E. Backlund,
Division Administrator FHWA—Kansas Division.

[FR Doc. 2018–19224 Filed 9–5–18; 8:45 am]
BILLING CODE 4910–22–M
Appendix C – Coordination Letters
Jason Luginbill
Field Supervisor
U.S. Fish and Wildlife Service
2609 Anderson Ave.
Manhattan, KS 66502

Subject: SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Luginbill:

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas. Since the federally-threatened Mead’s Milkweed is present, or known to be present on native prairie areas within the project study area, we are requesting you to be a cooperating agency.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. The project will also provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November
2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the scoping process for the project, an interagency coordination meeting will be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

Your agency's involvement should include those areas under your jurisdiction and area of expertise with no direct writing or analysis necessary for the preparation of the SEIS. The following are activities we will take to ensure interagency cooperation:

1) Invite you to coordination meetings;
2) Consult with you on any relevant technical studies as required for the project;
3) Organize joint field reviews, as appropriate;
4) Provide you with project information, including study results;
5) Encourage your agency to use the above documents to express your views on subjects within your jurisdiction or expertise; and
6) Include information in the project environmental documents that you need to exercise your National Environmental Policy Act (NEPA) responsibilities and any other requirements regarding jurisdictional approvals, permits, licenses, and/or clearances.

We look forward to your response to this request and your role as a cooperating agency on this project. The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have questions or would like to discuss in more detail the project or our
agencies' respective roles and responsibilities during preparation of this SEIS, please contact me by phone at (785) 273-2626 or via email at richard.backlund@dot.gov.

Sincerely yours,

Enclosures
South Lawrence Trafficway Supplemental EIS

Project Description

The proposed project is the improvement of K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence in Douglas County, Kansas. The overall project study limits begin just north of Interstate 70 at North 1800 Road (Farmer's Turnpike) and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road (Farmer's Turnpike) to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to East 600 Road (approximately 4.1 miles).

A project map is attached showing the study area for the project.

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. The project will also provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The K-10 West Leg Concept Study, conducted from 2014-2016 for the Kansas Department of Transportation, investigated the current and future needs and functions in the K-10/SLT West Section. This study considered alternatives for the future widening and upgrade of the corridor, which modified the current 2-lane expressway design to a 4-lane freeway design with limited access, grade separated interchanges in place of existing at-grade intersections. The concept study will be used as a reference document during the preparation of the SEIS.

A Supplemental Environmental Impact Statement (SEIS) will be prepared for the proposed project. The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of potential funding options for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading of the West Section as a four-lane freeway, with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will also be considered. The East
Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because a combination of funding options is being evaluated for the project. Therefore, the entire SLT corridor will be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

**Anticipated Impacts**

A wide spectrum of social, economic and environmental resources will be evaluated with the SEIS to determine impacts to the aquatic ecosystem, cultural resources, threatened and endangered species, floodplains, transportation, parks and recreation, noise and air quality, environmental justice and socioeconomics. This includes direct, indirect and cumulative impacts. Impacts may vary depending on the elements of the final design.

As part of the proposed project, existing right-of-way will be used whenever practical. However, additional right-of-way may be required to accommodate the proposed improvements in the West Section along U.S. 40, and at East 600 Road/Lecompton Road at I-70. Precise right-of-way impacts, as well as potential impacts will be determined as planning and design activities continue for the proposed project.

**Development Procedures**

This project is being developed for federal funding participation. A determination by the Kansas Department of Transportation and the Federal Highway Administration has identified this project as requiring the preparation of a Supplemental EIS.

Current regulations governing development of federally funded highway improvements require early coordination with units of government who may have interests in the project or its potential impacts. This Project Description is intended to provide early notification of the proposed project and to solicit comments regarding the potential impacts of such an action. Several federal, state, and local agencies will be contacted directly to request their early input as part of the project impact identification process.
Mark Frazier  
Chief, Regulatory Branch  
U.S. Army Corps of Engineers  
K.C. District, Attn. OD-R, Room 402  
Federal Building  
601 E. 12th Street  
Kansas City, Missouri 64106

Subject: SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Frazier:

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas. Since the project will impact wetlands and streams, and possibly some Corps-owned property, we are requesting your agency to be a cooperating agency for the project.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. The project will also provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent
SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the scoping process for the project, an interagency coordination meeting will be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

Your agency’s involvement should include those areas under your jurisdiction and area of expertise with no direct writing or analysis necessary for the preparation of the SEIS. The following are activities we will take to ensure interagency cooperation:

1) Invite you to coordination meetings;
2) Consult with you on any relevant technical studies as required for the project;
3) Organize joint field reviews, as appropriate;
4) Provide you with project information, including study results;

South Lawrence Trafficway Supplemental EIS

Project Description

The proposed project is the improvement of K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence in Douglas County, Kansas. The overall project study limits begin just north of Interstate 70 at North 1800 Road (Farmer’s Turnpike) and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road (Farmer’s Turnpike) to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to East 600 Road (approximately 4.1 miles).

A project map is attached showing the study area for the project.

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. The project will also provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The K-10 West Leg Concept Study, conducted from 2014-2016 for the Kansas Department of Transportation, investigated the current and future needs and functions in the K-10/SLT West Section. This study considered alternatives for the future widening and upgrade of the corridor, which modified the current 2-lane expressway design to a 4-lane freeway design with limited access, grade separated interchanges in place of existing at-grade intersections. The concept study will be used as a reference document during the preparation of the SEIS.

A Supplemental Environmental Impact Statement (SEIS) will be prepared for the proposed project. The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of potential funding options for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading of the West Section as a four-lane freeway, with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will also be considered.
Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because a combination of funding options is being evaluated for the project. Therefore, the entire SLT corridor will be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

**Anticipated Impacts**

A wide spectrum of social, economic and environmental resources will be evaluated with the SEIS to determine impacts to the aquatic ecosystem, cultural resources, threatened and endangered species, floodplains, transportation, parks and recreation, noise and air quality, environmental justice and socioeconomics. This includes direct, indirect and cumulative impacts. Impacts may vary depending on the elements of the final design.

As part of the proposed project, existing right-of-way will be used whenever practical. However, additional right-of-way may be required to accommodate the proposed improvements in the West Section along U.S. 40, and at East 600 Road/Lecompton Road at I-70. Precise right-of-way impacts, as well as potential impacts will be determined as planning and design activities continue for the proposed project.

**Development Procedures**

This project is being developed for federal funding participation. A determination by the Kansas Department of Transportation and the Federal Highway Administration has identified this project as requiring the preparation of a Supplemental EIS.

Current regulations governing development of federally funded highway improvements require early coordination with units of government who may have interests in the project or its potential impacts. This Project Description is intended to provide early notification of the proposed project and to solicit comments regarding the potential impacts of such an action. Several federal, state, and local agencies will be contacted directly to request their early input as part of the project impact identification process.

Subject: SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Gulliford:

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation (KDOT), is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas. Since the project will impact wetlands and streams and the federally-threatened Mead’s Milkweed is present, or known to be present on native prairie areas within the project study area, we are requesting you to be a cooperating agency.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);  
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and  
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. The project will also provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a
USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the scoping process for the project, an interagency coordination meeting will be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

Your agency’s involvement should include those areas under your jurisdiction and area of expertise with no direct writing or analysis necessary for the preparation of the SEIS. The following are activities we will take to ensure interagency cooperation:

1) Invite you to coordination meetings;
2) Consult with you on any relevant technical studies as required for the project;
3) Organize joint field reviews, as appropriate;
4) Provide you with project information, including study results;
5) Encourage your agency to use the above documents to express your views on subjects within your jurisdiction or expertise; and
6) Include information in the project environmental documents that you need to exercise your National Environmental Policy Act (NEPA) responsibilities and any other requirements regarding jurisdictional approvals, permits, licenses, and/or clearances.

We look forward to your response to this request and your role as a cooperating agency on this project. The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have questions or would like to discuss in more detail the project or our
agencies' respective roles and responsibilities during preparation of this SEIS, please contact me by phone at (785) 273-2626 or via email at richard.backlund@dot.gov.

Sincerely yours,

Division Administrator

Enclosures
South Lawrence Trafficway Supplemental EIS

Project Description

The proposed project is the improvement of K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence in Douglas County, Kansas. The overall project study limits begin just north of Interstate 70 at North 1800 Road (Farmer's Turnpike) and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road (Farmer's Turnpike) to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to East 600 Road (approximately 4.1 miles).

A project map is attached showing the study area for the project.

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. The project will also provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The K-10 West Log Concept Study, conducted from 2014-2016 for the Kansas Department of Transportation, investigated the current and future needs and functions in the K-10/SLT West Section. This study considered alternatives for the future widening and upgrade of the corridor, which modified the current 2-lane expressway design to a 4-lane freeway design with limited access, grade separated interchanges in place of existing at-grade intersections. The concept study will be used as a reference document during the preparation of the SEIS.

A Supplemental Environmental Impact Statement (SEIS) will be prepared for the proposed project. The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of potential funding options for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading of the West Section as a four-lane freeway, with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will also be considered. The East
Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because a combination of funding options is being evaluated for the project. Therefore, the entire SLT corridor will be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

**Anticipated Impacts**

A wide spectrum of social, economic and environmental resources will be evaluated with the SEIS to determine impacts to the aquatic ecosystem, cultural resources, threatened and endangered species, floodplains, transportation, parks and recreation, noise and air quality, environmental justice and socioeconomics. This includes direct, indirect and cumulative impacts. Impacts may vary depending on the elements of the final design.

As part of the proposed project, existing right-of-way will be used whenever practical. However, additional right-of-way may be required to accommodate the proposed improvements in the West Section along U.S. 40, and at East 600 Road/Lecompton Road at I-70. Precise right-of-way impacts, as well as potential impacts will be determined as planning and design activities continue for the proposed project.

**Development Procedures**

This project is being developed for federal funding participation. A determination by the Kansas Department of Transportation and the Federal Highway Administration has identified this project as requiring the preparation of a Supplemental EIS.

Current regulations governing development of federally funded highway improvements require early coordination with units of government who may have interests in the project or its potential impacts. This Project Description is intended to provide early notification of the proposed project and to solicit comments regarding the potential impacts of such an action. Several federal, state, and local agencies will be contacted directly to request their early input as part of the project impact identification process.

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Ahmad,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit,
was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have any questions about the project please contact Aaron Frits, Road Design Leader, at (785) 296-4139 or aaron.frits@ks.gov.

Sincerely,

Aaron M. Frits, P.E.,

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Blackburn,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No
Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have any questions about the project please contact Aaron Frits, Road Design Leader, at (785) 296-4139 or aaron.frits@ks.gov.

**SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas**

Dear Ms. Brede,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No
The "Build" decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have any questions about the project please contact Aaron Frits, Road Design Leader, at (785) 296-4139 or aaron.frits@ks.gov.

Sincerely,

Aaron M. Frits, P.E.,

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Ms. Chinn,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit,
was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Guertal,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No
"Build" decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Henning,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.
As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have any questions about the project please contact Aaron Frits, Road Design Leader, at (785) 296-4139 or aaron.frits@ks.gov.

Sincerely,

Aaron M. Frits, P.E.,

Topeka, KS 66604

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Hoeme,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit,
was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. 400 State Ave., Room 200
Kansas City, KS 66101-2406

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Mohr,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No
Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Mortenson,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit,
was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Nelson,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.
As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have any questions about the project please contact Aaron Frits, Road Design Leader, at (785) 296-4139 or aaron.frits@ks.gov.

Sincerely,

Aaron M. Frits, P.E.,

Tracy Streeter
Director, Kansas Water Office
900 SW Jackson Street, Ste. 404
Topeka, KS 66612

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Ms. Streeter,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of
Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Taylor,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No
The "Build" decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have any questions about the project please contact Aaron Frits, Road Design Leader, at (785) 296-4139 or aaron.frits@ks.gov.

Sincerely,

Aaron M. Frits, P.E.,

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Wenger,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No
Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

SEIS for K-10 Highway (South Lawrence Trafficway), Douglas County, Kansas

Dear Mr. Werthmann,

To comply with the National Environmental Policy Act (NEPA), the Federal Highway Administration (FHWA), in cooperation with the Kansas Department of Transportation, (KDOT) is initiating a Supplemental Environmental Impact Statement (SEIS) for improvements to a section of the K-10/South Lawrence Trafficway (SLT), located within the south and west limits of the City of Lawrence, in Douglas County, Kansas.

The overall project study limits begin just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike and extend to just east of the existing K-10/23rd Street system interchange. The overall length is 19.0 miles and is broken down as follows:

- The West Section begins just north of Interstate 70 at North 1800 Road/Farmer’s Turnpike to US-59/Iowa Street (approximately 8.7 miles);
- The East Section begins at US-59/Iowa Street and continues to the existing K-10/23rd Street system interchange; and
- The project study area also includes East 600 Road/Lecompton Road at Interstate 70 (approximately 0.6 mile), and U.S. 40 from K-10 to E 600 Road (approximately 4.1 miles).

A previous Environmental Impact Statement (EIS) was prepared in 1990 for the overall SLT study area. The purpose and need stated in that EIS was to relieve congestion on existing 23rd Street and Iowa Street by diverting through and local traffic from these two existing streets and Clinton Parkway, thereby achieving an improved level of traffic service on the local street network. The goals of the current proposed project on the West Section are to increase capacity, enhance safety, and address access while minimizing or avoiding impacts to sensitive project environmental features within the project footprint. Also, the project will provide an efficient and cost-effective transportation facility for users of K-10 Highway and the surrounding state highway system.

As an outcome of the approved 1990 EIS, two expressway lanes of the West Section were constructed and opened to traffic in 1996. The East Section was not constructed and a subsequent SEIS with a “No
Build” decision was approved in 2000. A subsequent EIS, in conjunction with a USACE 404 Permit, was completed in 2002 and adopted and approved by FHWA in November 2007, with a Record of Decision (ROD) issued in May 2008. Since the completion of the ROD, the East Section four-lane freeway was constructed and opened to traffic in 2016.

The current SEIS, as a supplement to the original 1990 EIS, will evaluate a ‘No Action’ alternative as well as a combination of toll-free and tolled build alternatives for the entire SLT study area. Roadway configuration options will be evaluated, including upgrading the West Section as a four-lane freeway with controlled access and interchanges at West 6th Street/U.S. 40, Bob Billings Parkway, Clinton Parkway, an interchange between Wakarusa Drive and Kasold Drive, and at U.S. 59/Iowa Street. Also, interchange alternatives at I-70/East 600 Road/Lecompton Road and K-10/I-70/North 1800 Road will be considered. The East Section of the SLT is included in this study because it was a part of the study area for the original 1990 EIS, and because funding options, such as tolled and toll-free options, are being evaluated for the project. Therefore, the entire SLT corridor will need to be evaluated to assess potential impacts of the funding options. It is not anticipated that there will be any physical roadway improvements or modifications that require additional right-of-way on the East Section as a result of the funding options.

A formal scoping process will be initiated that involves appropriate federal, state, and local agencies, as well as stakeholders and the public. As part of the early coordination process, we are soliciting comments from your agency regarding the proposed project as it relates to your agency’s area of expertise. Comments and information you provide will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and ultimately the SEIS document, as appropriate.

An interagency coordination meeting will also be held on October 4, 2018 with federal and state agencies. The meeting will be held at 8:30 am at the Bioscience and Technology Business Center, 2029 Becker Drive, Lawrence, KS 66047 and your agency is invited to attend the meeting.

The enclosed project study area map and project description should help you understand the nature of the project and help you determine the location of the proposed improvements. To remain on schedule, it is requested that your response be sent to our office within 30 days of receipt of this letter. If you have any questions about the project please contact Aaron Frits, Road Design Leader, at (785) 296-4139 or aaron.frits@ks.gov.

Sincerely,

Aaron M. Frits, P.E.,
Road Design Leader

Mr. Richard Backlund  
Nebraska Regulatory Office  
Attention: District Commander  
8901 South 154th Street  
Omaha, Nebraska 68138-3635

Dear Mr. Backlund:

This letter responds to your invitation to serve as a cooperating agency during the development of the Draft Supplemental Environmental Impact Statement for the K-10/South Lawrence Trafficway- West Leg Project. I am pleased to accept your invitation to serve as a cooperating agency for the development of the EIS.

During the formal review period, the U.S. Environmental Protection Agency will fulfill its responsibilities under section 309 of the Clean Air Act regarding its independent review of the Draft SEIS, as well.

While it is understood that there will be no formal Memorandum of Agreement issued between the lead agency and cooperating agencies, we would like to offer some parameters by which we can collaboratively define our role as we serve in this capacity.

- The EPA Region 7 program staff will provide timely reviews and comments on preliminary documents, reports, analyses and sections of the Supplemental Draft and Final EISs that address impacts to agency lands and resources.

- The EPA Region 7 will conduct a review of the Supplemental Draft and Final EISs, providing comments that address the issues of the proposed action and alternatives to agency lands and resources.

- The EPA Region 7 will participate in meetings and provide information as requested by Federal Highway Administration.

- At the request of the FHWA, the EPA Region 7 will make available personnel and/or expertise to the lead agency, to the extent practicable, and as staff availability and resources allow.

Amber Tilley (tilley.amber@epa.gov) will serve as the primary point of contact for the EPA Region 7’s National Environmental Policy Act Program and Tiffany DeLong (delong.tiffany@epa.gov) will serve as the primary point of contact for the EPA Region 7’s Clean Water Act 404 Program.
The EPA commends FHWA efforts to engage early with federal and state agencies that may have jurisdiction, expertise, or interest in various components of this project. The content and coordination resulting from the October 4, 2018, early interagency coordination meeting for this project were valuable and appreciated. We look forward to continuing our close work with FHWA and other cooperating agencies in the development of the SEIS.

Sincerely,

[Signature]

James B. Gulliford

RE: South Lawrence Traffic SEIS Cooperating Agency Response
FWS Tracking #2018-CPA-0691

Dear Mr. Ahumada:

This is in response to a letter we received dated October 18th, 2018, requesting a written letter from USFWS accepting the cooperating agency invitation and review and comments on the proposed Project Coordination Plan and Impact Methodologies Memorandum no later than November 15th, 2018. Please consider this letter to be our official acceptance to participate as a cooperating agency. Furthermore, it was requested we review and provide comments regarding on the proposed Project Coordination Plan and Impact Methodologies Memorandum.

We reviewed the Project Coordination Plan, and did not have any concerns regarding it. Upon receiving this correspondence Table 1 can be edited to show that the USFWS has accepted the invitation to be a cooperating agency. The point of contact from our Kansas Field Office will be Jason Luginbill, who is the office supervisor.

We also reviewed the Technical Memorandum South Lawrence Trafficway Impact Assessment Methodologies. In that it was stated that resource evaluation will begin with a review of the impacts stated in the original 1990 EIS. Many of the impacts stated in the original EIS will still be relevant for the supplement EIS. The Northern long-eared bat was not listed at the time of the previous EIS and the bald eagle was removed from the federal list in 2007. The bald eagle is still protected under the Bald and Golden Eagle Protection Act. We highly support the utilization of Kansas Department of Wildlife Parks and Tourism and the Kansas Biological Survey (KBS) regarding information concerning rare or protected communities and plants that may occur in the project area. The KBS is considered to be one of the best sources regarding identifying native plant communities. We did not find any issues with how the Impact Assessment Methodologies was composed. The section regarding
Threatened and Endangered Species adequately assessed how the study team will evaluate impacts to Threatened and Endangered Species.

Thank you for the opportunity for us to be a cooperating agency during the SEIS process. Please feel free to contact me with any questions or concerns. I can be reached at (785) 539-3474 ext. 105.

Sincerely,

Jason Luginbill
Field Supervisor

November 5, 2018

Mr. Richard Backlund, AICP
Division Administrator
U.S. Department of Transportation
Federal Highways Administration
6111 Southwest 29th, Suite 100
Topeka, Kansas 66614

Dear Mr. Backlund:

This is in response to your recent letter, received on October 19, 2018, requesting comments regarding the scoping meeting and associated materials distributed for review of the Supplemental Environmental Impact Statement for the Highway K-10/South Lawrence Trafficway, (SLT). Please reference your project number designation of HDA-KS.

Work associated with the project that will involve the placement of fill materials into streams, wetlands or other waters of the United States, will require some type of authorization by a Department of the Army (DA) permit. These types of activities require authorization from the Corps of Engineers under Section 404 of the Clean Water Act (Title 33 United States Code Section 1344). The implementing regulation for this Act is found at Title 33 Code of Federal Regulations Parts 320-332.

After identification and completion of the type and amounts of surface waters and wetlands within the study areas has been completed, please furnish a copy of the report to our office for review and concurrence. This project has been assigned Regulatory file number NWK-2018-1264 by our office. Please reference this number in all comments and/or inquiries to our office relating to this project.

Portions of the project may also require permission under Section 14 of the Rivers and Harbors Act (33 USC 408) because the activity, in whole or in part, would alter, occupy, or use a Corps Civil Works project. Please let our office know if any portions of the project may require work within portions of fee or easement land associated with the Clinton Lake Project.

Thank you for the opportunity to review the draft project coordination plan and methodologies report for the project and the opportunity to attend the interagency coordination meeting on October 4, 2018. If you have any questions concerning this matter, please feel free to write or contact Mr. Brian Donahue at 816-389-3703 or by email at brian.t.donahue@usace.army.mil.

Sincerely,

[Signature]

Regulatory Program Manager
Regulatory Branch
Appendix E - Stakeholder Engagement and Communications Plan
Introduction

The purpose of the stakeholder engagement plan is to outline communication and engagement activities that are taking place for the duration of the South Lawrence Trafficway (SLT) Supplemental Environmental Impact Statement (SEIS) as well as outline the overall approach for the project communications. This plan outlines objectives and tools we will focus on during the project and continue to refine the approach to stakeholder engagement and communication. The project team worked together to finalize this plan.

Project Description

The SLT SEIS will evaluate the area from just north of Interstate 70 at N 1800 Road/Farmer’s Turnpike to just east of the existing K-10/23rd Street system interchange. The corridor evaluation and SEIS will build upon work completed for the EIS reevaluation within the K-10 West Leg South Lawrence Trafficway Concept Study (hereafter referred to as ‘Concept Study’), and use the original EIS from 1990, and subsequent EIS completed in 2002, adopted and approved by FHWA in 2007 with ROD issued in May 2008, as a base document for the corridor. The SEIS will include additional analysis of a range of project funding options, including both toll-free and tolled alternatives.

Context of the Project

The SLT project is focused on improving safety and mobility for the SLT Corridor and the surrounding state highway system, and to some extent the local city streets. Preparation of the SEIS will build upon the work performed for the EIS reevaluation within the Concept Study, with additional analysis of a range of project funding options, including both toll-free and tolled alternatives. Public engagement tasks build on the previous public engagement activities from the Concept Study and expand the discussion to include funding alternatives for the project. With the history of public sentiment from an informed and engaged community, which spans a broad spectrum of opposition to approval on this project, it will be imperative that a proactive and methodical approach is used to discuss all the alternatives being considered.

Stakeholder Engagement Goals

The Stakeholder Engagement Plan builds on the following goals.

1. Create a comprehensive and transparent approach to inform and engage project stakeholders and the public in the SEIS process.
2. Enhance the visibility and online presence of the SLT project and ensure key stakeholders and others understand the reasons for each phase, its timing and its potential impact.
3. Interact with the project team, focus groups and advisory group to gather input on transportation needs in the community.
4. Identify, address and mitigate controversial issues early in a collaborative and constructive manner.
5. Ensure the stakeholder involvement process is fair, open and responsive to input of the public and the public knows where and how to locate project information.
Key Goals for Communication

We strive to keep the public and our project stakeholders informed about the alternatives being considered and project decision-making as part of the SEIS. With the history of public sentiment from an informed and engaged community, which spans a spectrum of opposition to approval on this project, it will be imperative that a proactive and methodical approach is used to discuss all alternatives being considered.

Overall our communication goals are to:

- Coordinate with stakeholders to set expectations and create a framework to engage and respond to the public.
- Conduct focus group sessions to discuss SEIS alternatives.
- Identify key stakeholders to create an Advisory Group to discuss alternatives and associated impacts, and gather feedback prior to presenting information to the public.
- Provide opportunities for the public at large to learn about the project and provide input on alternatives.
- Create and support an online presence for the study on Facebook, KDOT webpage and other social media.
- Track and document communications.

Planning Assumptions

The Stakeholder Engagement Plan builds on the following planning assumptions:

- The SEIS will include stakeholder and public engagement activities and is meant to be flexible and allow for adaptation to new and changing needs.
- The project will provide timely and accurate information about the project and opportunities for public input that align with NEPA and SEIS requirements.
- Materials for public distribution or exhibition will incorporate laymen’s terms, for both language and graphics, and will be structured such that key information is readily accessible to all members of the public. If applicable, materials will be reused for cost saving and efficiency.

Project Identity and Branding

There is a significant history with the South Lawrence Trafficway and there have been considerations at various times with different projects to rebrand the project name or incorporate K-10 into the name. To tie the project to the original EIS and to maintain continuity, this project will be known as The South Lawrence Trafficway SEIS, or SLT, or SLT SEIS.

Tools and Techniques

While the Stakeholder Engagement Plan is intended to be adaptable to changing circumstances and project developments, the following are the anticipated elements of engagement that will be used to inform and engage the stakeholders and the public during the SEIS process.
1. **Advisory Group** – KDOT and HNTB will meet with identified stakeholders to present information on alternatives and associated impacts to gather feedback prior to presenting information at public meetings. Up to four (4) Advisory Group meetings will be held. General meeting topics include, but aren’t limited to the following:
   a. **Meeting 1:** Project Initiation and Purpose and Need—Introduce the SEIS Purpose and Need, review history and alternatives being considered. The first meeting would occur prior to the public information open house #1.
   b. **Meeting 2:** Reasonable Alternatives—present alternatives and discuss potential funding options. The meeting would occur prior to the public information open house #2.
   c. **Meeting 3:** Discuss Screening of Alternatives—show screening process and how the preferred alternative will be selected and discuss public feedback on funding options and alternatives. This meeting would occur approximately 4-6 months after public information open house #2.
   d. **Meeting 4:** Present Preferred Alternative—Share the identified preferred alternative to be presented at the Public Hearing and what would be included as part of the Draft SEIS document and gather feedback.

2. **Elected Official Coordination** – Up to four (4) presentations will be given to Elected and Public Officials on the status of the project during the study. The project team will work with the city and county staff to discuss concerns related to the SLT SEIS. The presentations will serve as an opportunity to share study progress and understand the public official’s concerns. Presentations and meetings would follow a similar schedule as the Advisory Group, unless circumstances warrant presentations at different intervals.
   a. **Presentation 1:** Project Initiation and Purpose and Need—Review the project purpose and SEIS process. The meeting would occur prior to public information open house #1 in the first 90 days of the study.
   b. **Presentation 2:** Reasonable Alternatives—present the proposed alternatives and discuss funding options. The meeting would occur prior to the public information open house #2.
   c. **Presentation 3:** Discuss Screening of Alternatives—show screening process and how the preferred alternative will be selected and discuss public feedback on funding options and alternatives. This meeting would occur approximately 4-6 months after public information open house #2.
   d. **Presentation 4:** Present Preferred Alternative—Share the identified preferred alternative to be presented at the Public Hearing and what would be included as part of the Draft SEIS document and gather feedback. This meeting would occur shortly before the Public Hearing.

3. **Stakeholder Meetings** – Individual meetings will be held with stakeholders specifically impacted or concerned about the SEIS process, alignment alternatives or project impacts to discuss concerns and clarify issues. Up to 20 meetings are assumed during the project to adequately address citizen and community concerns.
4. **Public Meeting** - Plan and conduct up to three (3) public meetings, generally in an open house format unless otherwise warranted by the information presented, except for the formal public hearing process required for comments on the Draft SEIS. Meetings will occur at key project milestones according to the technical information available to present and where public input could best be used.

   a. **Public Information Open House 1**: Purpose and Need/Initial Alternatives—review purpose and need of Supplemental EIS, identify range of alternatives being considered and any new alternatives for discussion and introduce funding options for discussion. Share all options.

   b. **Public Information Open House 2**: Reasonable Alternatives—show screening process and how alternatives were narrowed down to the No Build and three proposed Build alternatives.

   c. **Public Hearing**: Preferred Alternative—share the identified preferred alternative and how the alternative was selected. This hearing is for the Draft SEIS document. A formal public hearing transcript will be prepared to document public comments at this meeting.

   All meetings can be converted to an online meeting format for additional public input opportunities.

5. **Focus Groups** – One (1) round of focus groups will be conducted by HNTB’s subconsultant, ETC. A round of focus groups consists of approximately 7 groups of 8-12 participants totaling about 70 total participants. Focus groups will be conducted over 2-3 days. Each group will be asked the same questions and will discuss SEIS alternatives to gauge perceptions of alternatives, knowledge gaps and messaging opportunities. Information from the focus groups will help inform other aspects of the study as well as how information is developed and presented.

6. **Community Presentations** – Presentations and listening sessions on the status of the project will be conducted with civic and community groups such as Rotary Clubs, Kiwanis, Chamber of Commerce, Home Owners Associations, Business Groups and Churches. Up to eight (8) presentations could be done over the course of the study. These presentations could serve as an opportunity to reach a broader spectrum of people to gather input and allow the project team to hear various points of view throughout the study. It is anticipated that nearly half of the presentations occur within the first six months of the study to build awareness to encourage public input.

7. **Audio/Web Meeting** – A conference call or web “town hall” meeting will be coordinated and recorded to allow a large number of participants to listen and ask questions at a designated time, and then available for playback later. This event would be geared towards commuters and regional stakeholders that may find it challenging to attend in-person meetings and events, but still have an interest in the project. The timing of this meeting is flexible, but is currently planned for the same time as the Public Hearing to allow for participants to have input during the Draft SEIS document phase.

8. **Drop-In Center** – Develop kiosks or community display boards at two (2) key milestones to convey alternative options at public events or community venues, such as super markets, libraries, banks or City Hall. The displays would be transitioned between two to three community locations to maximize exposure. The displays will be left for a week or two in
each location. The Consultant will develop displays (up to two per milestone) and will move displays around during the specific time frame. The Consultant will also identify regional functions occurring at the Rock Chalk Park, Sports Pavilion, Clinton Lake, Youth Sports Complex or other community festivals that would draw more regional traffic and would work to set up a display and staff (assume one (1) person per event) at those events (assume two (2) events) to gather additional information from regional users. The purpose of the displays is to build awareness of the SEIS so the public can provide input.

9. **Survey** – Two online surveys, with approximately 20 questions each, would be conducted to gather additional feedback on project alternatives and funding options at key milestones. Surveys provide the opportunity to gauge public response and reaction on specific issues or concerns. Through various survey opportunities we will be able to understand public perception and adjust our engagement or informational approach as appropriate. Surveys would focus on topics such as potential project-specific funding options, as well as other issues/interest areas such as access. Surveys would be sent out electronically and made available through our website. It is anticipated surveys would occur at the reasonable alternatives stage of the project and in the screening of the alternatives phase prior to the Draft SEIS being distributed.

10. **Informational Fliers** – A series of up to four (4) fliers will be created to discuss tolling and other potential project-specific funding options in a systematic way. Topics for the informational flyers are anticipated to be:

    a. Introduce SEIS study, goals and process for public engagement.
    b. Transportation funding options to be explored in the SEIS document
    c. Project alternatives considered
    d. Summarize recommended preferred alternative, final conclusions from Record of Decision and next steps.

11. **Informational Maps and Graphics** – Create and develop, either electronically or for printed use, up to three (3) additional maps or displays for use throughout the study.

12. **Social Media** – Create and support an online presence for the SLT SEIS by providing materials, static or video, to be uploaded on KDOT’s appropriate social media platforms and to the project website to share SLT dedicated materials and for other electronic media requirements.

13. **Project Website** – The South Lawrence Trafficway website will help KDOT inform and educate stakeholders and the public about the project. The website will be mobile compatible and ADA compliant. The site will provide a location to share project documents and allow interaction and dialogue to occur between the public and the project team. This opportunity will allow for transparency in the project and in the NEPA Process while creating more opportunities for public interaction with a wider, more diverse audience. The website will be linked to KDOT’s main website and will include project specific information. The project website address is [www.SLT-KS.org](http://www.SLT-KS.org) and the domain and hosting have been secured for three years.

14. **PIMA Implementation** - The Public Involvement Management Application will track and help manage stakeholder engagement through this technology tool using GIS elements. The application will be linked to the project website for integration and will create online meeting
forums and the ability to interact with the public and stakeholders. Comments can be entered, tracked and responses drafted using PIMA to allow easy documentation.

15. **Public Engagement Report/Log** - Key messages, activities, comments and public sentiment will be documented to show a thorough approach toward providing information and gathering public comment. The Final Public Engagement Report/Log will be developed to meet Title VI requirements.

16. **Dedicated Email Address** – A dedicated email address will be created for specific use during the project. This will allow a project identity to be promoted, and responses to stakeholder questions to be easily forwarded and responded to as needed throughout the SEIS. The email address will be: info@SLT-KS.org.

---

### Project Interest Groups and Stakeholders

Feedback from Lawrence area citizens is critical to the success of the SLT corridor. Various stakeholders will be engaged throughout the project to gather input and provide information. Their involvement will be tracked and managed through the Public Involvement Management Application (PIMA). These groups include but are not limited to:

- City of Lawrence
- City of Lecompton
- City of Perry
- Douglas County
- Jefferson County
- University of Kansas
- Haskell Nation Indian University
- Property Owners and HOAs
- Business Representatives
- Emergency Services/Police
- Local Chambers of Commerce/EDC
- Area Public School Districts
- Douglas County Residents
- Lawrence-Douglas County Metropolitan Planning Organization

---

### Communications Protocol

#### Media Communications

All media inquiries should be directed to the KDOT Public Affairs Director or the KDOT Project Manager unless otherwise discussed.

#### External Communications Protocol

The external communications protocol establishes how public responses are handled, by whom and in what time frame.

- **Time frame for response** - Questions submitted via the website or email address will receive an automated response acknowledging receipt of the comment. Other inquiries, received in writing should receive a response within one (1) business day acknowledging receipt of the comment with an estimated time for a response from the project team, if appropriate. Not all comments will require a response. Comments via social media should receive a timely response, as appropriate.
Review/Approval Process

The Stakeholder and Public Engagement Materials review & approval process is described below.

**Initial Review** – Assuming technical content is available, materials for public distribution or display will be provided to the client in a draft stage for review and comments well in advance of intended use. Generally, five (5) working days will be provided for review and comment. The client will be notified when circumstances prevent meeting this review period.

Reviewers for all materials include:

- **KDOT Study Team**
  - Aaron Frits
  - Kris Norton
  - Steve Baalman
  - Laurie Arellano
  - Other KDOT resources as needed*

- **HNTB Corporation Project Study Team**
  - Greg Weatherd, Project Manager
  - Gretchen Ivy/Kyle Kroner—NEPA Project Manager(s)

**Final Review** – A final draft, including graphics and layouts will be provided to the above team, no later than three (3) days prior to the final date before the production and printing deadline.
Schedule

Below is the general schedule for activities as we have identified them at this point. We will update schedule if there are significant changes.

<table>
